

ERNUR ZINELOV

Java Backend Developer

Almaty, Kazakhstan · zinelov.ernur@gmail.com · +7 (777) 306-2443 · github.com/YernurZinelov · linkedin.com/in/yernur-zinelov

Professional Summary

Motivated Java Backend Developer and recent Computer Science graduate from SDU University seeking an entry-level/intern position. Hands-on experience building backend projects using Core Java, multithreading, Spring Boot, and MySQL. Familiar with Object-Oriented Design, RESTful API development, ORM frameworks, and unit testing through self-directed pet projects. Eager to apply practical backend skills and grow within a production engineering team.

Technical Skills

Languages: Java (17), SQL
Frameworks & Libraries: Spring Boot 3, Spring Data JPA, Hibernate, Java Collections Framework, Stream API
Databases: MySQL, PostgreSQL
Tools & Platforms: IntelliJ IDEA, Git, GitHub, Maven, Postman, cURL
Core Concepts: RESTful API Design, Object-Oriented Programming (OOP), Relational Database Design, Dependency Injection, Layered Architecture, ORM, Data Structures & Algorithms

Projects

Minecraft Console Simulator <i>Java 17, Multithreading (java.util.concurrent), Generics, JUnit 5, Stream API</i>	GitHub Repository <i>Personal Project</i>
- Engineered a multithreaded simulation engine executing concurrent combat duels across synchronized threads with thread-safe state management. - Designed a layered architecture separating core models from services, utilizing an abstract <code>Entity</code> hierarchy and dynamic capability interfaces. - Implemented a generic <code>EntityManager<T extends Entity></code> component to ensure type-safe entity operations, lifecycle handling, and lookups. - Developed custom unchecked exceptions and robust error handling to guarantee application stability during invalid state transitions. - Achieved deterministic core logic by writing comprehensive JUnit 5 unit test suites covering damage/armor formulas, entity validation, and combat state changes.	
Expense Splitter REST API (In Process) <i>Spring Boot, Spring Data JPA, PostgreSQL, DTO Pattern, Global Exception Handling</i>	GitHub Repository <i>Personal Project</i>
- Designing a backend service inspired by Splitwise to model multi-user group expenses, payment shares, and balance calculations. - Modeled relational domain entities (<code>User</code>, <code>Group</code>, <code>Expense</code>, <code>ExpenseShare</code>) establishing <code>@OneToMany</code> and <code>@ManyToOne</code> JPA mappings. - Implemented Spring Data JPA repositories and a DTO architecture (<code>RequestDto/ResponseDto</code>) to enforce strict layer separation. - Created domain-specific exception handling using custom exceptions and a <code>@ControllerAdvice</code> global exception handler.	

Education

SDU University Bachelor of Computer Science, School of Information Technologies and Applied Mathematics <i>Relevant Coursework:</i> Advanced Algorithms, Database Management Systems, Fundamentals of Programming, Mathematics for Computer Science <i>Professional Training:</i> Java 17 Masterclass (Udemy), Java Data Structures & Algorithms (Udemy)	Kaskelen, Kazakhstan 2022 – 2026
--	-------------------------------------

Achievements

- State Scholarship Awardee:** 121/140 on the Unified National Testing (UNT).
- High High School Honors:** Graduated secondary education with distinction honors.
